

Opportunities and risks of a flexible aseptic production taking into account data integrity and patient safety

Flexible aseptic pharmaceutical production places high demands on plant availability and results in more complex production planning.

Industry 4.0, IoT and personalized medicine are on everyone's lips and demand / supply new methods and technologies.

In all efforts, data integrity and patient safety must not be compromised.

How flexible systems and automation have to be designed and how do the data centers of the future look to meet all aspects?

What role does man play in the changed production environment and what added value can be realized?

The presentation provides answers to these key questions and gives a good overview of current trends.
