

Semi Quantitative Risk Analysis of EPSC members

Ulrich Hörcher, BASF BE, Ludwigshafen am Rhein, Germany

The Semi Quantitative Risk Analysis working group from the EPSC, is comparing Risk matrix based practices (incl. LOPA) as applied within the industry. Risk matrices and risk criteria are tools on which we rely in daily practice. Actual examples have been worked out by various companies to understand how consistent the Risk matrix method is. Consistency data in theory and from an example are available for sharing.
